Tamura (BGHM) BRIGHAM & WOMENS HOSPITAL INC. Dzau VJ, Chen YE, Horiuchi M, WPI; 2000-062002/05. P-PSDB; AAY32375. A new regulatory element binding factor used to treat an adverse cardiovascular condition.

Claim 1; Page 77-79; 57pp; English.

This is the nucleotide sequence of cDNA clone KND42 encoding mouse negative regulatory element binding transcription factor CNREB-2. KND42 was obtained using yeast one-hybrid cloning and mouse kidney cDNA library screening. CNREB-2 binds to the 5' flanking region of the renin gene and

modulates expression of the gene. 2 Other isoforms (see AAX32376-77) of CNREB-2 have been identified, the shortest isoform showing strongest bindings activity to the CNRE of the renin promoter. CNREB-2 shares no significant homology to any other known gene or protein. It is a novel zinc finger transcription factor. Expression vectors, isolated nucleic acid molecules and CNREB-2 polypeptides are claimed. The invention also relates to CNREB-1 polymetheotides (see AAZ35040-43), polypeptides (see AAX32374) and inhibitors, and their use in claimed methods for decreasing or increasing remin expression, and for determining the level of CNREB-1 susceptibility to development of a remin-angiotensin system mediated disorder 8888888888888888888

                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the nucleotide sequence of a cDNA clone encoding mouse negative regulatory element binding transcription factor 2 (CNREB-2) long isoform (CNREB-2L. The clone was obtained using yeast one-hybrid cloning and mouse kidney cDNA library screening. CNREB-2 binds to the 5' flanking region of the remin game and modulates expression of the gene. 2 Other isoforms (see AAY32375 and AAX32376) of CNREB-2 have been identified, the short isoform showing strongest binding activity to the CNRE of the remin promoter. CNREB-2 shares no significant homology to any other known gene or protein. It is a novel zinc finger transcription factor. Expression of vectors, isofated nucleic acid molecules and cNREB-1 polypeptides are claimed. The invention also relates to CNREB-1 polypucies(see AAX35540-43), polypeptides (see AAX32374) and inhibitors, and their use in claimed methods for decreasing or increasing remin expression cetermining the level of CNREB-1 expression, an increase in expression being indicative of an increase discenting to development of a remin angiotensin system mediated disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1437

This is the nucleotide sequence of a cDNA clone encoding mouse negative regulatory element binding transcription factor 2 (CNREB-2) short isoform capulatory element binding transcription factor 2 (CNREB-2) short isoform as contained using yeast one-hybrid cloning and mouse kidney cDNA library screening. CNREB-2 binds to the 5' flanking region of the remin gene and modulates expression of the gene. 2 Other isoforms (see AAY32377) of CNREB-2 have been identified, the short isoform showing strongest binding activity to the CNRE of the remin contain. It is a novel zinc finger transcription factor. Expression or vectors, isoform, a novel zinc finger transcription factor. Expression or protein. It is a novel zinc finger transcription factor. Expression or vectors, isoform also relates to CNREB-1 polymotlectides (see AAX35040-43), polypeptides (see AAY32374) and inhibitors, and their use in claimed methods for decreasing or increasing remin expression, and for determining the level of CNREB-1 expression, an increase in expression being indicative of an increase susceptibility to development of a remin angiotensin system mediated disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CNREB-2S, CNRE binding factor; transcription factor; mouse; renin; negative regulatory element; cardiovascular disease; hypertension; congestive heart failure; diagnosis; therapy; ss.

Czf-1

```
The present sequence is that of a contig containing most of the murine Czf-1 coding sequence, lacking only the 5' portion which codes for the Neterinius of Czf-1 protein. The contig was obtained by screening mouse expressed sequence tag sequences using rat Czf-1 protein as a sequence probe. Czf-1 protein as a sequence probe. Czf-1 is expressed in a variety of tissue types, particularly osteoblasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells expressing high, i.e. constitutively active, levels of fibroblast growth factor receptor (FGGR). It is up-regulated in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nuclectide and amino acid sequences is above 85%. Czf-1 polynucleotides, polypeptides and serves as the characterisation, diagnosis and treatment of FGRR-related and skeletal diseases and disorders, such as ceteoarthritis, rheumatoid arthritis, and cartilage related diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TGCCAGACTTGAGTCTTCATGTGCCACCAGGTGGTGCCAGTTTCCTGCCAGACTGTGGGC

The present sequence is that of CDNA was isolated from a glioma CDNA protein, designated Czf-1. The CDNA was isolated from a glioma CDNA ilbrary using a probe from the 3' end of the CZf-1 gene. CZf-1 is expressed in a variety of tissue types, particularly osteoblasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells expressing high, i.e. constitutively active, levels of fibroblast growth factor receptor (FGFR). It is up-regulated in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nucleotide and anino acid sequences is above 85%. Czf-1 polymucleotides, polypeptides and antibodies can be used in the characterisation, diagnosis and treatment of FGFR-related and skeletal diseases and discasses.

The present sequence is that of CDNA encoding a novel human zinc finger protein, designated Czf-1. Czf-1 is expressed in a variety of tissue nuclei, designated Czf-1. Czf-1 is expressed in a variety of tissue nuclei by particularly offerbolasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells alternate expression and intracellular localisation pattern in cells factor receptor (FGFR). It is up-regulated in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nucleotide and amino acid sequences is above 85%. The human gene maps to chromosome 2p22-23. Czf-1 polynucleotides, polypeptides and antibodies can be used in the disractisation, diagnosis and treatment of FGFR-related and skeletal diseases and disorders, such as osteoarthritis, rheumatoid arthritis, and cartilage related diseases 1909 GCCTCCCACCTGTTTATTTAACTTATTTTCAGTGCTTTATAATAAAGGAAACACTAACAAA 1968 GCCTTTTAC----TGTTTTAACTTATTTCAGTGCTTTAATAATAAAGGAAACACTAAACAGA Czf-1 Human, Czf-1; chondrocyte; zinc finger; osteopathic; antiarthritic; antirheumatic; chromosome 2p22-23; gene; ss. New chondrocyte-derived zinc finger polypeptides and encoding polymuclectides, useful for detecting, diagnosing and treating (protein-related diseases, such as osteoarthritis and rheumatoid arthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the coding sequence for a human secreted protein. The sequence was isolated from an adult lung cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have tases as nutritional supplements, as cytokine or cell proliferation autoimmune diseases, as haematopoiesis regulators (treating mysloid or autoimmune diseases, as haematopoiesis regulators (treating mysloid or hymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      498

encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and SNy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic as and thrombolytic activity, arthritis and inflammation, leukaemias and classes for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 40206; 3071pp + Sequence Listing; English.

AMKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I)

polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM8169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCTGTCCCCACTGCCCCTTTGCCTGCAGCCTGGGCAACCTGAGGCGGCATCAGCGTA

                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of human reproductive system related antiqens. These can be use in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic Sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAGAGGAAGAAGAGGATGAAGGTGACGGCCACAACGACCAGCTCATGGGCTTTGAGA

(HUMA-) HUMAN GENOME SCI INC.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)agonists are useful in the nucleic acids, proteins, antibodies and (ant)agonists are useful in the adagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal jand, bone, bone marrow, breast gastrointestinal tract, liver, lung, or urogenital; (b) immune concerns autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid architis and ulcerative colitis; (c) cardiovascular disorders eugh actorial ischaemias; (d) wound healing (e) neurological diseases such as viral, bacterial, fungal and parasitic infections, diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly with the printed in the printed specification that pass obtained in electronic format directly and the printed specification the printed in electronic format directly as the sequence data for sequences Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases. Disclosure, SEQ ID NO 8208; 1701pp + Sequence Listing; English. ###X#XBBBBBBBBBBBBBBBBB

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with nootropic, encoded polypeptides (AAM36642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous cystem, such as peripheral nervous injuries, peripheral neuropathy and contains and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Chiteral sclerosis, and Shy-Drager Syddrome. Other uses include the cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic cand thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C. N. & disorders. Note: The sequence data for this patent did not form

COMMENT

```
* NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the fizes of the gaps between them are based on estimates that have provided by the submittor.

* The sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number will be preserved.

* The finished sequence as soon as it is available and the accession number gap of 100 bp in length to accession for the accessio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 124 Row: a Column: 14
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, GenomeScan gene prediction.
